
In today's modern world, there are two types of people in the world. I am one of those people who think technology is a blessing from God. We live in a time where we can send someone across the world in a manner of minutes and stay entertained on the toilet for hours. Technology has progressed to levels that most could never imagine when they were kids. For some, living without their smartphone is like cutting off their own limbs and is nearly impossible to do for more than a day or two at a time unnoticed. The other type of person sees technology as an evil thing that makes us less human by substituting real life interactions with digital ones. There are unique situations that arise when technology is needed for business transactions that could not be solved by a human. These situations can arise when you need to pay someone without having to physically see them and also when you need to pay someone who does not have an address or credit card. You can use these techniques in your business without worrying too much about it and thus creating the necessary money transactions in the real world for your business to function properly. QuickBooks Point of Sale (POS) has been around since its first release in 1998. This product has changed how retail industries handle their money transactions, although the implementation of this product is far from perfect. Intuit has had many problems with demand for this product over the years which have prevented it from being upgraded or changed. The user interface for this software is very dated and not very intuitive, so there are hundreds of different guides out there that have been created to help people learn how to use this software. The reported number of online guides for QuickBooks POS is around 300,000 which makes it easy to find assistance when you are trying to figure out something that isn't working right for you. The price of QuickBooks Point of Sale varies depending on how advanced it is, but the cheapest version is called Intuit QuickBooks Inventory V4.0 BeaSt. This version only allows you to track five inventory items and has no accounting features. The most expensive version out there is Pro, which allows for 1,000 line item tracking and has all the other accounting features like payroll, business owner reports and tax reporting. The Pro version also comes with all other Intuit software (like Quicken) to allow the users to sync their data between different products if they wish to do so. Intuit QuickBooks Point of Sale (POS) is very difficult to get into if you are coming from a different software like Microsoft Word. The interface is so old fashioned that it looks like something out of the 70s, especially since most of the people coming from other software products are coming from newer software companies. Intuit QuickBooks Point of Sale also has very poor search engine optimization (SEO). This means that users will constantly get frustrated when they cannot find what they're looking for in all the different websites relating to this product. Anyone who wants to use this product will have to memorize an excruciatingly long list of commands that can be used in order to get things done on this product.
